

We offer professional body piercing with the highest sterilization standards and top quality body jewelry.

When visiting a piercing studio, there are a few fundamentals to look for:

Sterilization - this is the most important aspect of any studio! Make sure they are using an autoclave or Statim to sterilize needles, jewelry and piercing equipment. The studio should be sporetesting this machine monthly and have documentation to prove this.

Training - What type of formal training does the piercer have? Have they been properly trained in cross contamination and aseptic techniques? Have they taken a blood borne pathogens course in the past year?

Jewelry - Body piercing jewelry comes in many different materials. Make sure the studio is using implant grade pieces. The studio should be able to provide a mill certification from the manufacturers proving the legitimacy of their product.

Smile Gem FAQ'S

How long will the gem stay on for?

The lifespan of your gem is never guaranteed; there are many things that affect this, particularly your dental hygiene habits. The gems can last anywhere from 2 months to 2 years.

Will the gem harm my tooth?

When properly placed on a natural tooth, it will not damage or harm your tooth in any way.

Can I still have my teeth cleaned by my dentist?

Yes, you can and should have your teeth cleaned as regularly as your dentist recommends. The tooth gem will not be a problem for the hygienist cleaning your teeth, the area underneath the gem is sealed and will not allow any bacteria in.

Will regular brushing affect my gem?

The presence of the gem will not make any difference regarding dental hygiene but, we do recommend not using an electric toothbrush for the first 48 hrs after the gem has been applied.

How do I remove the gem when i no longer want it?

The gem can easily be removed by your dental professional or by our studio, an appointment for this will be necessary so please book ahead.

Does the application process hurt?

Not at all!! The procedure is similar to placing braces on a tooth; it is applied to the tooth with adhesive, there is no drilling involved and the whole procedure only takes about 5 minutes.

The Rules

Don't touch or play with your gem!

Don't eat or drink anything for a minimum of 2 hrs after the application.

Stick to soft foods for 24 hrs after the procedure.

Eating only soft foods will ensure that the bond between the gem and your tooth is secure.

Do not brush your teeth for 12 hrs after the service and do not use an electric toothbrush for 48 hrs afterward.
